SUMMARY

Fresh BSIT honor graduate specializing in full-stack web and mobile development using React, React Native, Node.js, and FastAPI, with experience building and shipping real-world applications across academic and professional settings.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python

Frontend: React, NEXTjs, React Native, HTML/CSS

Backend: Node.js, Express.js, NESTjs, FastAPI, REST APIs, MySQL

Tools: Git, GitHub, VSCode, Vite, Expo CLI, Docker

EXPERIENCES

Software Development Intern, SympH

Feb 2026 - June 2026

Finspend

- Resolved UI and data bugs across the web app including chart rendering issues, responsive layout fixes, and cross-tab data persistence
- Built full-stack features including auto-budget creation for uncategorized expenses, user-defined custom categories, and a premium upgrade paywall with badge component
- Implemented backend budget auto-creation logic in NestJS services, wiring expense creation to budget existence checks across manual entry, PDF import, and bank sync flows
- Worked within a Next.js/NestJS monorepo using Git branch workflows and PR reviews on a production codebase

Daily Drip

- Conducted manual testing and bug reporting for the React Native mobile app
- Documented UI/UX inconsistencies and functional bugs to support the development team

Full Stack Developer, UCLM Capstone Project

Oct 2025 - May 2026

DERMASCAN+: A MOBILE SKIN CONDITION DETECTION AND PERSONALIZED SKINCARE RECOMMENDER SYSTEM FOR YOUNG ADULTS

- Primary developer on a 5-person team; built and deployed a skin condition classifier using Google Derm Foundation embeddings (6144-dim) with logistic regression and MLP classifiers
- Designed and implemented a two-stage severity model and dermatologist-curated treatment recommendation pipeline
- Built the full React Native/Expo frontend, Node.js/Express backend, and FastAPI inference server hosted on HuggingFace Spaces with MySQL on Railway
- Integrated the camera pipeline using Expo Camera, managed EAS builds, and demoed the app live during capstone defense

PROJECTS

Pawnalysis

Personal Project

Chess game analysis with AI-powered insights. Upload PGN files and get Stockfish evaluations explained in human-readable language by an LLM.

- Integrated LLM API to generate human-readable commentary per move, with selectable AI coach personalities
- Built with FastAPI backend and Next.js frontend, with Stockfish running as a local engine process
- Parses PGN input and runs move-by-step Stockfish engine analysis, returning evaluations, best moves, and top alternatives

Mangananggal

Personal Project

A web application that allows users to search manga titles via the MangaDex API and save selected titles to a local database

- Built with React and Express.js
- Integrated with local storage / database for data management.
- Uses external API called Mangadex API

EDUCATION

Bachelor of Science in Information Technology

2022-2026

University of Cebu Lapu-lapu Mandaue

- Dean's Lister
- Academic Excellence in Third Honor (Latin Honors)

CERTIFICATIONS / EXTRACURRICULARS

- IT Passport Examination (PhilNITS) 2026
- Academic Excellence in Third Honor (Latin Honors) 2026
- Chess Athlete 2018-2020, 2024
- AI Powered-ICT : Shaping the Future with Responsibility 2024
