Liloan, Cebu

<https://github.com/m4yoNICE>

Fresh BSIT graduate specializing in full-stack web and mobile development using React, React Native, Node.js, and FastAPI, with experience building and shipping real-world applications across academic and professional settings

Education

Bachelor of Science in Information Technology

University of Cebu Lapu-lapu Mandaue

2022-2026

Dean's Lister

Technical Skills

Languages:

JavaScript, TypeScript, SQL,
Familiar with Java, Python

Frontend:

React, NEXTjs, React Native,
HTML/CSS

Backend:

Node.js, Express.js, NESTjs,
FastAPI, REST APIs, MySQL

Tools:

Git, GitHub, VSCode, Vite, Expo
CLI

Certificates / Extracurriculars

IT Passport Examination (PhiINITS)

Information Technology

Professionals Examination Council
2026

Chess Athlete

University of Cebu Lapu-lapu
Mandaue
2024

Academia del Christifidelis
2018-2020

AI Powered-ICT : Shaping the Future with Responsibility

SM Seaside Sky Hall
2024

Experience

Symph Inc - Software Development Intern

Feb 2026 - June 2026

Finspend

- Resolved UI and data bugs across the web app including chart rendering issues, responsive layout fixes, and cross-tab data persistence
- Built full-stack features including auto-budget creation for uncategorized expenses, user-defined custom categories, and a premium upgrade paywall with badge component
- Implemented backend budget auto-creation logic in NestJS services, wiring expense creation to budget existence checks across manual entry, PDF import, and bank sync flows
- Worked within a Next.js/NestJS monorepo using Git branch workflows and PR reviews on a production codebase

Daily Drip

- Conducted manual testing and bug reporting for the React Native mobile app
- Documented UI/UX inconsistencies and functional bugs to support the development team

Projects

DermaScan+

Academic Project

Mobile prototype for skin condition scanning and analysis for capstone project

- Built a two-stage ML pipeline using Google Derm Foundation embeddings for skin condition classification, deployed on HuggingFace Spaces via FastAPI
- Developed React Native Expo frontend with Node.js/Express backend hosted on Railway, connected to MySQL via Drizzle ORM
- Implemented HSV-based skin detection gating to filter non-skin inputs before model inference

Pawnalysis

Personal Project

Chess game analysis with AI-powered insights. Upload PGN files and get Stockfish evaluations explained in human-readable language by an LLM.

- Integrated LLM API to generate human-readable commentary per move, with selectable AI coach personalities
- Built with FastAPI backend and Next.js frontend, with Stockfish running as a local engine process
- Parses PGN input and runs move-by-step Stockfish engine analysis, returning evaluations, best moves, and top alternatives

Mangananggal

Personal Project

A web application that allows users to search manga titles via the MangaDex API and save selected titles to a local database

- Built with React and Express.js
- Integrated with local storage / database for data management.
- Uses external API called Mangadex API
